1 General Overview

This is a document in SBML Level 2 Version 4 format. This model was created by the following three authors: Nick Juty¹, Vijayalakshmi Chelliah² and Youfang Cao³ at September 23rd 2013 at 12:03 a. m. and last time modified at April 28th 2014 at 3:57 p. m. Table 1 provides an overview of the quantities of all components of this model.

Kinetic Law

Derived unit contains undeclared units

$$v_2 = k_2 \cdot [S] \quad (4)$$

7 Derived Rate Equations

When interpreted as an ordinary differential equation framework, this model implies the following set of equations for the rates of change of each species.

Identifiers for kinetic laws highlighted in gray cannot be verified to evaluate to units of SBML substance per time. As a result, some SBML interpreters may not be able to verify the consistency of the units on quantities in the model. Please check if

- parameters without an unit definition are involved or
- volume correction is necessary because the `hasOnlySubstanceUnits` flag may be set to `false` and `spacialDimensions` > 0 for certain species.
